I've loaded it into my iPhone app. When I run the app I get the following error: Error Domain=SQLErrorDomain Code=-1 "could not open database file" UserInfo=0x5d8610 {NSLocalizedString=could not open database file}, NSLocalizedStringFailureReason=Could not open the database. Please check the database file path. I have the database file stored in a place I can see it with a file browser. The file system is locked (I have my developer certificate installed and a developer account) so I cannot delete or move the file.

```
+ (sqlite3*)
getOpenDatabaseWithName:(NSString*)dbName { NSArray *paths =
NSSearchPathForDirectoriesInDomains(NSDocumentDirectory,
NSUserDomainMask, YES);
NSString *documentsDirectory =
[paths objectAtIndex:0]; NSString
*dbPath = [documentsDirectory st

@"db.sqlite"]; int res =
sqlite3_open([dbPath UTF8String],
&db); if (res) { NSLog(@"Error
opening database: %s",
sqlite3_errmsg(db)); } return db; }
```

I'm completely out of ideas. Anyone have any clues? A: Given that you're calling one of the sqlite3\_open functions, the
