## **Bystronic Laser Bybase Bysoft 6 7 3 17**

ByBase 6 provides the programming functions of BySoft 7 in madeshift programs as interactive user input. ByBase 6 also supports vending, bar feeding, and various systems for the inverse cutting of pipes and profiles. ByBase 6 offers fully configurable parameter settings for the bending, trimming, and the stacking of metal. Meanwhile, ByBase 6 facilitates the optimization and the execution of the cutting process, from the incoming CAD files to the associated logistics. BySoft 7 enables the creation of all manufacturing-related infographics and automation software. Just imagine, BySoft 7 has all the functions that can be used on a daily basis with other CAM systems, such as basic, CAD, milling, press, milling, and various technology. Using multiple bending steps makes it possible for Bystronic to complete the required part in one process step. For example, the upper hemisphere and the lower hemisphere of the part can be bent in a single process step. Through the use of multiple processes, cutting speed on average, processing volume and production times can be significantly increased. For example, 2.3 times greater cutting speeds and 0.9 times increased processing volumes. Cutting plans are a very good example of the possibilities of a CAM Digital Machine. The material is automatically and optimally, from whatever combination of methods is required, sliced. BySoft 7 with it the process of milling, bending, welding, back-stitching, folding, foil... BySoft 7 has a cutting and bending sequence functions, for example, it lets you select an existing sequence of bending methods, creates a Bending Code out of it, and then directly applies it to the part. BySoft 7 also creates a Stacking Code from it and then directly applies it.

## **Bystronic Laser Bybase Bysoft 6 7 3 17**

---

to implement digital sheet metal processing and production management within an order-to-delivery workflow, bystronic develops standard, integrated software packages as well as tailor-made solutions for each individual customer. the result: costs reduced by the amount of effort spent on manual processing. the professional services of a large company are what make bystronic unique. as a long-term partner, bystronic provides you with local knowledge, experience, motivation, support, and a wide range of services. this is the extra advantage that companies consistently identify when choosing a partner. as a software manufacturer, bystronic offers customized solutions that meet the specific requirements of our customers. we provide you with expert support for selecting, purchasing, testing, and using our software in the industries of automotive, shipbuilding, mechanical and metalworking engineering, and power engineering. bystronic provides you with professional service and support at every step of your project. our experts will not only analyze and test your settings and workflows in our own specialist test centers and laboratories, but also adapt the software settings to your particular requirements. as a leading metal cutting and milling software vendor, bystronic offers users a complete range of sheet metal processing solutions. we make sure that these solutions are tailored to the user's individual needs and, in addition to our products and services, that you are given support from day one. following the latest trends and innovations in the machine-tool world, we want to put our exceptional expertise and technical knowledge at your service. together we can achieve anything. 5ec8ef588b
